

WHY FUZE ON SHEETS

The Only Permanent, Non-Toxic Antimicrobial Bedding Technology on Earth

FUZE Biotech | Salt Lake City, UT | 58 Worldwide Patents | EPA Registered | Peer-Reviewed Published Research

0.25-1 mg/kg

Application Rate

1,000,000x

Less Chemistry

200+

Wash Durability

ZERO

Ion Leaching

6/6

E.S.K.A.P.E. Pathogens

TEN REASONS COSTCO NEEDS FUZE

1

THE COMPLETE SLEEP UPGRADE

Beyond odor: FUZE sheets **wick moisture faster, sleep cooler, block UVA/UVB, and resist bacteria, mold, and mildew**. Plus longer-lasting color protection. It's not just sheets — it's a health product that commands premium shelf space.

2

58 WORLDWIDE PATENTS — UNMATCHED IP

The most protected antimicrobial textile technology in existence. FUZE is produced via **liquid laser ablation** — a patented mechanical process, not chemical synthesis. This IP moat gives Costco a defensible exclusive no competitor can replicate.

3

CARBON POSITIVE — RECYCLED ELECTRONICS

FUZE metamaterial is sourced from **recycled consumer electronics** — circuit boards, microchip contacts, metal foils. Every sheet diverts e-waste from landfills. Not carbon neutral. Carbon positive. A circular economy story Costco members will champion.

4

ZERO WASTE MANUFACTURING

Applied as an ultra-fine mist through a **closed-loop system**. No water waste, no chemical runoff, no binders, no curing agents. The carrier is 99.998% ultrapure water. The cleanest textile manufacturing process in the industry.

5

LIFETIME DURABILITY — EPA VERIFIED

The **ONLY** antimicrobial with EPA-registered lifetime durability. Verified over **200+ wash cycles** via ICP-MS testing. Competitors max out at 15-50 washes. Costco members buy once and stay protected forever.

6

ABSOLUTELY ZERO HARMFUL CHEMICALS

No PFAS. No formaldehyde. No VOCs. No biocides. No binders. No surfactants. The application is **below drinking water standards**. Passes every chemical screening program. Safe for babies, sensitive skin, and daily contact.

7

NON-TOXIC MECHANISM — SULFUR SEQUESTRATION

Competitors poison cells with toxic ions. FUZE **starves bacteria** by disrupting disulfide bonds and shutting down the ferredoxin electron transport chain. Non-ionic. Non-lytic. Non-leaching. A difference of *kind*, not degree.

8

ESCAPE PATHOGEN EFFICACY — PEER REVIEWED

Published in **Antibiotics (2026)**: FUZE eliminates all 6 *Enterococcus*, *Staph* (MRSA), *Klebsiella*, *Acinetobacter*, *Pseudomonas*, *Enterobacter* superbugs — with **zero resistance development**. No other textile antimicrobial has this published data.

9

COMPLETELY RECYCLABLE — CRADLE TO CRADLE

FUZE-treated sheets are fully recyclable at end of life. No toxic residue, no microplastic contamination, no special processing. From recycled electronics in, to recyclable bedding out. True circular lifecycle.

10

MORAXELLA ODOR ELIMINATION

FUZE permanently eliminates **Moraxella osloensis** — the #1 cause of pillow stink, sheet souring, and towel odor. No fragrances, no masking. The metamaterial is embedded at the fiber level and lasts the life of the product. Cleaner sleep = higher satisfaction, fewer returns.

"This is not a finish. This is a material upgrade to the entire category."

Permanent protection. Zero chemicals. Zero leaching. Carbon positive. Peer-reviewed science.

No competitor can match this. Every competitor is pivoting away from their own chemistry. FUZE is the future.
