

Why invest in FUZE

FUZE Biotech makes the only **non-leaching antimicrobial metamaterial** on earth — a patented, sole-source platform that engineers durable, multi-functional performance directly into textiles and surfaces, without silver-ion leaching, binders, or PFAS. We are raising **\$10M+** to convert proven brand demand into scaled commercial revenue.

Prepared for Victor M. Mauricio (Business Development Manager) & William J. Barone (Sr. Marketing Manager), Fashion & Textile Dept. · FUZE Biotech, Salt Lake City, USA · Andrew Peterson, CEO & Founder

THE OPPORTUNITY

The antimicrobial textile market (~\$14B) is being reshaped by a regulatory and brand-led retreat from legacy chemistry — silver-ion, zinc, quats and PFAS-bound finishes that leach into skin and wastewater and face tightening biocide scrutiny (EU BPR, California SB 707, the Texas-AG/Lululemon PFAS actions). Brands need a finish that performs *and* survives that scrutiny. FUZE is that finish — and because the same metamaterial bonds to hard surfaces, antimicrobial textiles are the entry point to a **~\$49B surface platform** (plastics, coatings, hard-surface sanitization).

WHY FUZE WINS — THE MOAT

01 · Safety & zero toxicity

Non-leaching by design — bonds into the fiber and kills on contact. OEKO-TEX Standard 100 Class I (baby-safe), bluesign® approved, EPA registered (federal) + California EPA (Q1 2026), PFAS-free. A finish you can put on a newborn's onesie.

02 · Sustainability

Active at 0.25–1.0 mg/kg. No PFAS, binders, or curing burden. Metamaterial is laser-synthesized from recycled electronics — circular feedstock, low-energy, solar-capable production. Drops into existing finishing lines (exhaust, pad-dry-cure, spray) with no capex.

03 · Unmatched IP & supply

58 worldwide patents across the material, its synthesis, and its application. The **only** producer on earth via proprietary liquid laser ablation. Competitors can copy a claim; they cannot make the molecule. The moat is the material.

04 · Performance platform

One treatment, a full stack: antimicrobial, anti-odor, antifungal, antiviral, UV protection, moisture-wicking and IR/radiant-heat management — all durable to 100 washes. Validated on ASTM E2149, the test built for non-leaching contact-kill.

TRACTION & VALIDATION

In testing, validation, or commercial programs with leading global brands and mills:

Apparel / outdoor: Nike, Patagonia, The North Face, KUIU, Rhone, Spanx, Canada Goose, On Running.

Hospitality / home: Marriott, Hilton, Choice Hotels, Welspun, Nomad Home.

Mills & supply: SanMar, Penfabric, BesTex, Toray.

Trading houses: Mitsui, Itochu.

Operating backbone in place: FUZE Atlas — our multi-portal platform that runs the brand → mill → lab → distributor supply chain (spec enforcement, ICP/efficacy tracking, QR traceability, ESG reporting). A global distributor network is already active across the US, China, Turkey, Dubai and SE Asia. We don't need to build the machine — we need to feed it.

THE RAISE & USE OF FUNDS — \$10M+

Capital is directed at the three things that convert today's brand pull into recurring, scaled revenue: **proven field talent, channel development, and supply scale** — plus the brand recognition that makes FUZE the specified ingredient.

ALLOCATION	SHARE	WHERE IT GOES & WHY
Key field talent experienced operators, not headcount	30%	Hire proven industry people already in the field, not generalists: a VP/Director of Sales with existing brand & mill relationships; Technical Service / Application Engineers embedded mill-side to dial in first-pass results (the single biggest lever on speed-to-approval); and a Marketing / Brand lead to drive ingredient-brand recognition.
Business development	25%	Channel and distributor expansion, key-account conversion, and entry into Japan / North Asia where Mitsui's network accelerates us — including SEK Mark (JIS L 1902) qualification for the Japanese market.
Growth & supply scale	25%	Additional laser-ablation production capacity, working inventory, and regional supply positioning so we can serve volume orders without lead-time risk as programs move to bulk.
Brand & technology recognition	20%	Build FUZE into a specified ingredient brand — hangtag program, co-marketing, third-party validation library, and certification depth that lets brands market FUZE with confidence.
Total	100%	Built around a \$10M base; scales proportionally above it.

● WHY MITSUI

Mitsui is not a passive check — it is the ideal strategic partner to commercialize FUZE. Mitsui's Fashion & Textile group brings global trading scale, deep brand and mill relationships, and a direct route into Japan and North Asia, where FUZE's safety and sustainability profile is tailor-made for the market and SEK Mark certification opens the door. Capital and commercialization in one partner — accelerating the exact channel work this raise funds.

The thesis in one line: a sole-source, patent-protected, non-leaching platform — already pulled by the world's leading brands — at the regulatory inflection point that retires legacy chemistry. The capital turns proven demand into scaled, defensible revenue, and Mitsui is positioned to lead the channel that captures it.
