

FUZE-PROTECTED SHOWER CURTAINS

Fights mold. Dries faster. Stays fresh. Lasts longer.

FUZE is a proprietary, permanently-bonded metamaterial finish engineered into the curtain — not sprayed on. It keeps the curtain cleaner and fresher in the one place textiles struggle most: the constantly-damp bathroom. Clean, non-leaching, PFAS-free chemistry that nothing rinses out of.

5 INNOVATIONS BUILT INTO EVERY FUZE CURTAIN

01

Mold & Mildew Defense

Inhibits the growth of mold and mildew on the curtain — the #1 cause of pink/black staining, musty odor, and early replacement. Stays visibly cleaner, far longer.

03

Quick-Dry Performance

An engineered surface sheds moisture and dries faster after every shower — removing the standing dampness that lets mildew take hold in the first place.

05

Clean by Design — Non-Leaching & PFAS-Free

FUZE bonds to the fiber and works by contact — it does **not** leach. Nothing rinses into the bath water, down the drain, or onto skin. PFAS-free, formaldehyde-free, no finishes.

WHY IT WORKS FOR A RETAIL PROGRAM

Safe & compliant

PFAS-free and free of restricted substances — clean for a skin- and water-contact bathroom product, and aligned with leading-retailer chemical and Prop 65 expectations.

Sustainable story

Active works at trace levels from a circular, recycled-source feedstock — and a longer-lasting curtain means fewer replacements and less landfill waste. A genuine "better for the planet" line.

Proven & certified

A permanently-bonded platform already trusted across global apparel, hospitality and home-textile programs — backed by independent third-party testing shared on request.
